

COLOCATION

SECURE, RELIABLE & MANAGED OFF-SITE HOSTING

Managing IT infrastructure and data internally creates a significant business overhead in hardware, space, time and people. So, can you achieve the security and reliability you need without the continued investment?

Fusion colocation provides a highly cost-effective answer. We will host your servers, websites and business applications within controlled, high security data centres connected to the internet. Our data centres are monitored round-the-clock by our Network Operations Centre (NOC) to ensure availability and performance. And we provide a range of additional options – so the service you get is what your business needs.

All IT systems are placed in secure, controlled facilities with a resilient infrastructure to keep systems up and running in the event of power or connectivity failure.

We provide a comprehensive Service Level Agreement (SLA), and access to highly skilled customer service and technical support teams.

Internet access, remote hands, 24x7x365 service monitoring, data backup and managed firewalls are available to ensure your systems are up and running.

Key Benefits of Colocation:

- Reliable and secure facilities
- Supporting your business
- Managed IT costs
- Optional services
- Performance Tracking
