

COMPANY PROFILE

OUR CORE BUSINESS PRODUCTS & SERVICES

Design, build and project management of complex wide area networks.

Fusion specialises in connecting multiple sites through high speed wide area networks which are secure, robust and flexible. We connect large corporate offices, branch offices and home workers under single or multiple network clouds, allowing your business to optimise communication and creativity.

Fusion ensures that the solutions provided today to link your offices are entirely scalable to suit your business growth and development tomorrow, and bandwidth increases and additional locations can be seamlessly integrated into your future network.

Fusion can design the network architecture, provision the last mile connectivity and configure and despatch all necessary hardware to complete the solution.

Low Contention Broadband

The key foundation for a stable network is reliable, dedicated bandwidth. Fusion has access to the widest range of low contention broadband services, meaning we can provision a fully uncontented circuit virtually anywhere in the UK, from 512Kb up to 1Gb or more. Fusion manages not only the broadband element, but also the physical line media (copper, ethernet etc.) for every connection.

Consultation

We realise clients may already have strong ideas of how they want to connect their wide area network, which is why our account managers will listen, make suggestions and work with you to refine your strategy, leading to rollout and project completion. We know that WAN connectivity may only be one element of your project implementation, so we're there to work with you, and your own specialists or third parties, to ensure the total solution is achieved.

If, however, you are starting from a more fundamental need for change rather than a total plan, we can offer a full project consultancy and offer independent, impartial recommendations to help achieve your connectivity goals.
