

National Ethernet

 **Request a call back**

 **Request a quote**

National Ethernet has rapidly developed into the industry standard for high bandwidth, fully scalable connectivity.

Increased availability in recent years means prices have decreased rapidly to bring Ethernet easily within reach of medium and even smaller businesses.

Fusion works with multiple wholesale carriers to provide you with the most competitive quotation regardless of your geographic location.

With Fusion Ethernet, you choose the bandwidth you need now, and then easily change it to meet emerging demands.

For example, a 10Mb connection for current bandwidth needs on a 100Mb “bearer line” may be upgraded to a 50Mb connection, typically within 48 hours.

In many key locations, we can now offer high bandwidth Ethernet circuits for approximately the same price as two 2Mb SDSL lines with hardware, and of course Ethernet usage is fully uncapped and uncontended, includes our Enhanced Care SLA, and comes complete with dedicated Account Management and premium UK based Support.

Ethernet pricing is entirely bespoke based upon availability and your exact location. Our pricing

starts from a 10Mb circuit but we can quote for up to 1Gb connectivity if required.

Please contact us with your requirements and site postcode for a precise quotation by return.

Key Features of National Ethernet Services:

- Available nationwide
- Delivered over fibre optic
- Enhanced Service Level Guarantee
- Lowest possible latency
- Fully managed provision, connect and use
- Optional managed support
- Suitable for real time services
- Bandwidth from 2Mb to 1Gb
- Cheapest price per Mb service
